

PROFESSIONAL SUMMARY

- **Senior Frontend Engineer with 8+ years of IT experience** specializing in **React js, JavaScript, TypeScript, Angular and modern frontend architecture**, delivering scalable, high-performance enterprise web applications.
- Strong expertise in **frontend architecture, component-driven development, design systems, reusable UI components, state management, and scalable application design**.
- Expertise in designing and developing **Single Page Applications (SPAs)** using React js, with strong knowledge of **JSX, Virtual DOM, one-way data flow, routing, forms, events, and component lifecycle**.
- Strong experience designing and implementing **Backend-for-Frontend (BFF) architectures**, including **API orchestration, data aggregation, service abstraction, frontend-specific API design, and optimized frontend-backend communication**.
- Proven experience in **frontend performance optimization**, including **code splitting, lazy loading, bundle optimization, rendering optimization, DOM analysis, and efficient JavaScript execution**.
- Experienced in building **reusable React component libraries and UI systems**, improving consistency, maintainability, scalability, and development efficiency across applications.
- Strong expertise in integrating **RESTful APIs and backend services**, with experience implementing **asynchronous workflows, graceful error handling, resilient API integration, and secure frontend-backend communication**.
- Proficient in **frontend testing and quality engineering** using **Jest and React Testing Library**
- Worked with **Git, JIRA, and Azure Boards**, across the complete **SDLC and Agile/Scrum delivery lifecycle**.
- Strong analytical and problem-solving skills with the ability to **evaluate technical approaches, resolve complex frontend issues, improve existing implementations, and contribute to architectural and engineering decisions**.

TECHNICAL SKILLS

- **Frontend** - React js, Redux, Redux-Toolkit, Angular, Rxjs, HTML 4/5, CSS/SCSS, Tailwind css, JavaScript, TypeScript, Material UI,
- **Testing & QA** - Jest, React Testing Library
- **Version Control and CI/CD** - Git, Bitbucket, CI/CD, Github Actions
- **Methodology & Monitoring** - Agile, Jira, Azure Devops
- **Code Quality & Security** - SonarQube, BlackDuck Scans

EXPERIENCE

Senior Software Engineer (April 2023 to Present) , MBRDI

- Implemented Redux Toolkit for centralized state management, designing modular slices, actions, reducers, and selectors to manage complex application state and ensure predictable state updates across React modules.
- Implemented AbortController for API requests to cancel in flight calls when users changed filters, navigated between views, or triggered subsequent requests, preventing stale data updates and unnecessary network traffic.
- Developed infinite scrolling for large datasets using paginated API calls and Intersection Observer, loading data incrementally as users approached the end of the list while avoiding unnecessary API.
- Refactored frontend data fetching and rendering workflows using lazy loading, memoization, optimized state updates, and component-level rendering strategies, improving application responsiveness and performance
- Participated in code reviews, upholding high standards of quality and promoting best practices among the development team.

Senior Software Engineer (June 2022 to Jan 2023) , GE Healthcare

- Built reusable React components using configurable props and composition, reducing duplication and ensuring consistent behavior across application modules.
- Leveraged React Hooks, Context API's, RTK for asynchronous data fetching and efficient cross component communication

Software Engineer (Jan 2020 to April 2022) , FIS

- Developed and maintained React-based application modules by breaking complex screens into functional components and implementing business workflows using React Hooks, Redux, JavaScript, and TypeScript.
- Implemented REST API integrations using asynchronous JavaScript patterns, handling loading states, error scenarios, response mapping, and updating the UI based on backend data.
- Delivered features and project milestones within committed timelines. Worked closely with designers and backend developers to bring responsive, accessible web applications to life using React, Redux, and Tailwind CSS.
- Investigated and resolved functional defects and production issues, debugging frontend logic, API responses, state-management problems, and browser-related issues using Chrome DevTools.
- Participated in code reviews and technical discussions, incorporating feedback from senior engineers and following established frontend coding standards and development practices.
- Worked with Git-based development workflows, including branching, pull requests, conflict resolution, and collaborative source-code management as part of an Agile development team.

Software Engineer (Jan 2017 to Jan 2020) , TATA Elxsi

- Developed reusable Angular components for application screens and common UI functionality, using Angular, TypeScript, HTML, and CSS to build maintainable and responsive web interfaces.
- Implemented Angular services and HTTP integrations to consume REST APIs and bind backend data to UI components, gaining hands-on experience with component communication, data binding, and asynchronous operations.
- Worked on resolving SonarQube code quality issues and application security findings, refactoring Angular and TypeScript code to improve maintainability and adherence to project coding standards.
- Collaborated with senior developers, UI/UX designers, and backend developers to understand requirements, convert designs into Angular-based web pages, integrate APIs, fix defects, and deliver features within project timelines.

EDUCATION

Bachelor of Engineering in Information Science from Visvesvaraya Technological University, Bangalore (2017)
